(54) Safety catch for shutter moving systems

(57) This safety catch permits to obtain a closure of window shutters equipped with an opening and closing automatism that acts through motor-driven elements.

In general, the safety catch according to the present

invention consists in providing a further play in a motorizing system (1) since the conventional support (B) and the relative bottom element of the motor housing are replaced by a round element (8) in which the motor can rotate around its axis.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 02 2085

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
