(54) **Resin composition and molded product**

(57) A resin composition is provided containing a polyarylene sulfide, and an aromatic polyester with a higher glass transition temperature than the polyarylene sulfide and represented by a general formula (1) shown below:

wherein, Ar represents either an aromatic ring or a heterocyclic ring; R¹ to R⁴ each represent a hydrogen atom or an alkyl group of 1 to 8 carbon atoms, which may be the same or different, provided that at least one of these groups is an alkyl group of 1 to 8 carbon atoms; Y represents a single bond, a bivalent hydrocarbon group of 1 to 12 carbon atoms which may incorporate a hetero atom, an oxygen atom, a sulfur atom, etc.; and n is an integer representing the number of repeating units), as well as a molded product produced using such a composition.
