(54) **Kit of elements for the support of rods, provided with sliding components and parts for the insertion of various decorations**

(57) The kit according to the present invention includes sliding elements which permit to insert several supporting rods and arrange them at a different distance according to the need.

The position can be changed because one of the components can move back and forth along a stirrup track. In this way, it is not necessary to use any tools to

shorten the components utilized to support the rod.

The kit includes threaded elements which permit the mounting of various decorations to embellish the supporting rods. The present kit permits to mount the decorations in the preferred position and then, it is possible to modify their position according to practical and visual requirements.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 03 02 0443

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
