(54) Blind apparatus

(57) A slat supporting member (8), which is interposed between, on the one hand, a pair of link mechanisms (4,5) and, on the other hand, each of a plurality of slats (9) to allow said slat (9) to be supported by said pair of link mechanisms (4,5), has a first support and a second support connected to the first support by means of a fitting and securing device. The first support includes a first arm portion having a pair of shaft holes in which shaft portions of a pair of shaft members (23,26) are respectively inserted and secured rotatably, a shaft portion disposed in such a manner as to pass through a guide slit, and a fitting projection adapted to be fitted in a fitting portion of said slat. The second support includes a second arm portion having at one end portion and the other end portion thereof a pair of shaft holes in which shaft portions at the other end portions of the shaft members (26) are respectively inserted and secured rotatably.

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
