(54) **Antenna arrangement for radio communication terminals**

(57) Antenna for a radio communication terminal, having a first antenna element comprising a main radiator (1) for the terminal, and a second antenna element comprising a counterpoise (2), wherein said counterpoise defines walls (3) of a screened compartment (6) carrying a functional component (7), such as a camera,

of the terminal therein. A screened cable (8) runs from the interior of said compartment through said walls to a cooperating member (9) of said functional component outside said compartment, wherein a screening member (10) of said cable connects the main radiator to the counterpoise. A feeding point (11) of the counterpoise is connected to a tuning filter (12).

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 44 5153

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
