(54) Method and apparatus for lighting with reflection

(57) An apparatus (10) for lighting. The apparatus includes a first light source (12). The apparatus includes a first housing (14) in which the first light source is disposed. The apparatus includes a support structure (16) to which the first housing is attached. The apparatus includes a reflection portion (18) having at least two reflectors (20). The reflection portion is attached to the support structure and in spaced relationship with the first housing such that light from the first light source is directed to desired locations. Alternatively, the apparatus includes a first light source (12). The apparatus includes a first housing (14) in which the first light source is disposed. The apparatus includes a support structure (16) to which the first light source is attached. The apparatus includes a second housing (30) in which the second light source is disposed. The second housing attached to the support structure and in spaced relationship with the first housing. The apparatus includes a first reflector (32) disposed with the second housing and opposing the first light source so light emitted by the first light source is reflected by the first reflector.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 04 25 2495

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
