(54) **Device for application in paperboard or other material processing machines for preventing main shafts from bending**

(57) A device for application to operating machines for processing paperboard or corrugated paperboard or other materials in sheet or strip form, and designed for preventing main shafts of said machine from bending, is characterized in that said device comprises a supporting bar for the shaft supporting assembly, which supporting

bar is arranged in a longitudinal direction, with respect to the paperboard material feeding direction, and being supported by cross members in turn applied, at their end portions, to the main shoulders of the machine, and at the central part thereof being supporting by supporting uprights and elements bearing on the floor.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 04 02 4378

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
