(54) **A connector housing assembly and an electric connector assembly**

(57) An electrical connector is adapted and arranged to simplify the operation of fitting a lid into a housing body of the electrical connector, and in turn realize enhancement in productivity and reduction in production cost of the connector. A connector housing assembly for assembling the electrical connector (100), comprises the connector housing body (110) that is provided with a receiving chamber (111) being open to outside, a contact (120) that is received in the connector housing body (110) in such a way that it can contact a counterpart contact, and a lid (130) that fits into the connector housing body (110) to cover the receiving chamber (111), the electrical connector (100) being so arranged that the wire (W) that is connected to the contact (120) is led out through a space between the connector housing body (110) and the lid (130). This connector housing assembly is a combination of the connector housing body (110) and a lid assembling member (A) wherein an auxiliary member (140) is interconnected to the lid (130) by a severable interconnecting part (150).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 04 25 6875

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
