(54) **Method/apparatus for receiving and/or reproducing digital signal**

(57) An apparatus (52) is provided for receiving (210) a digital signal comprising a plurality of time-division multiplexed digital programs (160-163) with discrimination information and guide information describing the contents of said plurality of programs. The apparatus includes a program selector (230) for selecting a program from the plurality of programs based on the discrimination information, data former (290) which forms guide information regarding the selected program from the received guide information and output means (203) connected to a recording/recording device (53) which outputs the selected program with its related guide information.
