(54) **Container for fermented foods**

(57) The present invention provides a container for fermented foods that temporarily gathers gas, generated by fermented foods contained in the container, and allows the gas to be discharged to the outside at an appropriate time. The fermented food container includes a container body (10) having a plurality of locking protrusions (15) provided around the container body (10). The fermented food container further includes an inner lid (20)

to close the open top of the container body (10), with an inner valve unit (30) provided on the inner lid (20). The fermented food container further includes an outer lid (35) coupled to the container body (10) and spaced apart from the inner lid (20) by a predetermined distance, thus defining a gas storage space between the inner lid (20) and the outer lid (35), with an outer valve unit (40) provided on the outer lid (35).
