(54) Street lighting system

(57) A street lighting system, comprising a reflector (10) essentially consisting of a series of surfaces (11-16) with an optical function, among which, in general, there is no geometrical continuity, and arbitrary connecting surfaces (18), not optically controlled, which serve to give

continuity to the composite surface; if the reflector (10), thus constructed, is maintained with the outlet eye parallel to the street level, it does not disperse the light flow upwards and also produces an illumination distribution, on the street level, corresponding to an ideal average luminosity under pre-established photometric conditions.

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 05 07 5521

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
