(54) Anti-Counterfeit sealing device

(57) Disclosed herein is an anti-counterfeit sealing device provided at a neck portion (2) of a packaging container. The anti-counterfeit sealing device comprises an upper body (10) integrally coupled to the neck portion (2) by a body clamp (60), a lower body (20), an anti-counterfeit means (50) floating on the water by buoyancy, an open/close plummet (30) adapted to open/close a pathway in the lower body (20), and a middle stopgap (40), the open/close plummet (30), the middle stopgap (40) and the anti-counterfeit means (50) being provided inside the upper body (10) and the lower body (20) so as to prevent a third party who has no right to do so from repackaging the container. Once the container provided with the anti-counterfeit sealing device is open, it cannot be used for repackaging the illegal contents, and consumers can purchase an original product with confidence by easily recognizing the counterfeit product. Moreover, as the third party cannot repack the illegal contents with the container any more, the supplier can achieve enhancement of sales.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 04 25 3866

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
