(54) **Door closer**

(57) A door closer (1), comprising a plate (2) for anchoring to the door frame (3), a box-like body (4) which is rigidly coupled to the door (5), and two arms (6, 7), which are mutually pivoted at one end (8) and in which one (10) of the opposite ends (9, 10) is pivoted freely to the plate (2) and the other end (9) is associated rotatably with an elastic torsional means installed within the box-like body (4). The plate (2) is provided with pairs of holes (13, 14) for fixing to the door frame (3), which are arranged at the mutual distance conventionally used for conventional door closers, and the plate (2) can be installed on the door frame (3) according to a plurality of configurations which depend on the pair of holes (13, 14) used. The box-like body (4) comprises an adjustment element (15) for the action of the elastic means.

The present search report has been drawn up for all claims

Place of search	Date of completion of the search	Examiner
The Hague	7 December 2006	WITASSE-MOREAU, C

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document
