(54) **Gymnastic device**

(57) A gymnastic device in the form of a swing or trapeze. Substantially horizontal support means (10) are raised from the ground by generally vertical support means (11). Extendible lengthways hands support means (19, 30) are mounted at, or near, one end of the hands support means (19) perpendicularly to the horizontal support means (10) in a manner allowing angular rotation about the horizontal support means, the lengthways hands support means (19, 30) being provided with resistive means (70) arranged in a manner allowing reciprocal motion of the user in an upward forward direction. The hands support means (19, 30) are also provided with locking means (20; 52; 68) adapted to engage the horizontal support means (10) thereby providing a fixed support at a desired position about the horizontal support means. Extendible lengthways legs support means (17, 82) are mounted at, or near, one end of the legs support means (17) perpendicularly to the horizontal support means (10) in a manner allowing rotation about the horizontal support means (10). At, or near, the opposite end of the legs support means (17, 82), foot retention means (84 to 93) are provided, and the legs support means are further provided with resistive means (78) arranged in a manner allowing reciprocal motion of the user in an upward forward direction.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 05 25 3663

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
