(54) Telescopic armrest

(57) The present invention relates to an armrest capable to be associated to a seating, of the type comprising a support portion (2) for a user's arm of said seating telescopically coupled with an engaging portion (3) of the armrest with the seating. The telescopic coupling between the support (2) and engaging portions (3) can be manually operated and provides a plurality of intermediate stop points (9) between a least extended position (A) and a most extended position (B) of the armrest. Advantageously, the armrest comprises thrust means for moving the support portion towards the most extended position thereof.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 05 01 2816

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
