## (54) Bedside cradle

(57) A cradle comprises a container (H,K) in which a baby can lie. A first side of the container is open or has a side panel which is capable of being displaced to allow access to the container (H,K) when the cradle is positioned alongside a parental bed. The cradle is supported at an adjustable height above a floor surface. The container (H,K) has a nose (F) portion which is positioned

along the first side of the container and which protrudes outwardly from the container. The nose portion (F) can press firmly into a mattress of the parental bed and ensures that there is always a continuous bridge between the baby's mattress (G) and the parental bed. The container (H,K) is in the form of a carry cot which can be detached from the support structure (A,B,C).

## ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 06 25 0882

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
