(54) **Lamp with temperature dependent, movable elements**

(57) The present invention relates to a lamp (1) for positioning around a light bulb (5). The lamp comprises elements (4) that in a first position are folded around the light bulb (5) and in a second position are moved away from the light bulb (5). At one of their ends, the elements (4) are by means of a deformable (3) member connected

with a frame part (2), such that at a first temperature, the elements (4) are in the first position and at a second, higher temperature, the elements (4) are in the second position. In this way, when the light bulb (5) is switched on, a movement of the elements (4) takes place that corresponds to the unfolding of the petals of a flower.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 06 07 5787

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
