(54) **Draft excluder particularly for doors and windows**

(57) A draft excluder (1) particularly for doors and windows having a fixed profiled member (2), which can be anchored to the lower edge of a door and has a hollow transverse cross-section which is open downward, and a movable profiled member (9), which is provided with a sealing means (20) and is inserted at least partially in the fixed profiled member. The movable profiled member is connected to the fixed profiled member and is provided

with an automatic movement means which, by overcoming the action of an elastic means, moves it from a raised position, which is spaced from the floor, when the door is open, to a lowered position in contact with the floor, when the door is closed. The particularity of the present invention is that it includes a detachable and adjustable abutment means (12) for determining and setting removably the pivoting point of the coupling means with respect to the fixed profiled member.
