(54) **Hinge**

(57) The present invention relates to a hinge which includes a frame part (10) which is intended to be fastened to a frame or the like, and a door part (20) which is intended to be fastened to a door leaf (D) or the like, wherein the frame part includes a frame leaf (11) and a tongue (12) which is connected to the frame leaf by means of a hinge axle, and wherein the door part includes a bent or folded metal plate (21) which is configured to accommodate the tongue on the frame part and an eccentric device (30) for height adjustment of the door part relative to the tongue of the frame part. The eccentric device includes an eccentric part (31) and a first peg (32) which projects out axially from the eccentric part and which is accommodated in a through-penetrating opening (29) in a base part (23) of the bent metal plate, and wherein the bent metal plate includes a first lug (35) which as a result of abutment with the side of the eccentric part opposite the first peg prevents the first peg from exiting from the opening.
