(54) **Method for building an outer wall**

(57) A method for building an outer wall to be provided with one or more frames, which outer wall comprises an inner cavity leaf, a cavity and an outer cavity leaf. First the outer cavity leaf (1) is built in brick around one or more timely placed temporary windows (2). Next, the temporary windows are removed and replaced with frames (4). Then, against the inside of the outer cavity leaf, insulation (5) is provided, if desired with allowance for an open cavity (6), and finally the inner cavity leaf (7)

is provided. The outer cavity leaf is preferably manufactured from glued bricks while preferably Kapla frames are used that are hoisted in from outside and are mounted from inside. Providing the inner cavity leaf can be deferred until the completion phase of the building; for instance in the same pass as in which non-bearing inner walls are provided.
