(30) Priority: **04.10.2005 IT VI20050254**

(54) **Safety mechanism, in particular for movement devices used on boats**

(57) A safety mechanism, in particular for movement devices used on boats, such as motor-driven hinges for sliding doors of hulls, adapted for allowing the quick and safe release of a main movement pin (10) of the hinge, in the event of danger and/or damage, comprising a knurled knob (11), associated to the movement pin (10), the rotation of which allows raising the main body of the pin (10) which, in this way, comes out of the hub (5) and detaches the contact portion from the pinion (34) of the gearmotor (35), the latter in turn connected to the electrical motor (36) for moving the pin (10).

The present search report has been drawn up for all claims			
Place of search The Hague		Date of completion of the search 12 September 2014	Examiner Witasse-Moreau, C
CATEGORY OF CITED DOCUMENTS X : particularly relevant if taken alone Y : particularly relevant if combined with another document of the same category A : technological background O : non-written disclosure P : intermediate document T : theory or principle underlying the invention E : earlier patent document, but published on, or after the filing date D : document cited in the application L : document cited for other reasons & : member of the same patent family, corresponding document			

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 06 12 1592

5

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
