(54) **Locking device for public telephone strongboxes**

(57) The invention relates to a locking device for public telephone strongboxes arranged on a support (3) joined to the body (1) of the strongbox, on which an electric gearmotor (4) acting on a nut (7) is assembled, which nut (7) actuates a link rod (9) supplying in turn a 90° rotational movement to a pair of opposite shafts (14-14') with a free and beveled edge, capable of blocking re-

spective hooks (15-15') joined to the door (2), which is joined to the body (1) through inner and hidden hinges. In this way, the electric motor (4) can be actuated by means of a remote control and the location of the hinging elements or the locking elements cannot be observed outside the strongbox, the door (2) showing a completely smooth and clear surface which makes any manipulation tending to force the strongbox considerably difficult.
