(54) **Dispensing container for two flowable products**

(57) A dispensing container for two flowable products for separately dispensing the two flowable products includes a first container (21) receiving a first flowable product and including a first dispensing outlet (23) and defining a hollow interior, a second container (22) receiving a second flowable product and including a second dispensing outlet (24), the second container being positioned in the hollow interior. A fitment (30) is assembled into the first dispensing outlet and connects to the second dispensing outlet. The fitment defines an inner outlet (36) for dispensing the second flowable product and an outer outlet (37) for dispensing the first flowable product. An adapter sleeve is assembled to the fitment. A hollow dispensing spout (32) is inserted into the inner container, through the inner outlet, and defines an open outlet. A threaded closing cap (33) is connected to the adapter sleeve and includes a plug portion for closing off the open outlet of the dispensing spout.
