(54) **Internal refrigerator component for containing and supporting food and bottles**

(57) An internal refrigerator component for containing and supporting foods and bottles (10) comprises a body (2) defined by a base (3), from the perimetral edge of which walls (4,5,6,7) upwardly extend to define an internal cavity of said body. One of said walls (7) is movable

relative to the adjacent walls and can be inclined to these latter within said cavity starting from a position raised from the base, said movable wall comprising on the corresponding edge of the base at least one projecting portion (12) intended to support a corresponding bottle when the wall is in said inclined position.
