(54) **Method for reducing the moisture content of air of a defined space**

(57) Method for reducing the moisture content of air of a first defined space in communication with, via an entrance to said first defined space, at least one second defined space, the air of first defined space having lower moisture content than that of said at least one second defined space, whereby the reduction of the air moisture content is achieved by at least one means for dehumidified air. The reduction of the air moisture content is

achieved by dividing said at least one second defined space into two compartments arranged in series and communicating with each other via partition means, taking wholly or partially air having higher moisture content from the compartment of the second defined space located longest from the first defined space, dehumidifying said air, and feeding said dehumidified air wholly or partially to the compartment of the second defined space located closest to the first defined space.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 07 44 5020

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
