(54) **Blind with folding guides**

(57) The present invention refers to a blind with folding guides that is, a roller blind, of the type commonly known as "Italian" in which a significant part of the blind, when it is extended, may be projected frontally to constitute a type of awning which improves ventilation conditions of the room where the blind is installed, maintaining its sun barrier effect in such a way that a marked structural simplification of the blind is achieved along with a substantial improvement in the properties of said blind, in addition to enabling the conversion of a conventional blind with fixed guides into a folding blind by using an alignment profile which is provided centred on one of its arms tow parallel partitions oriented oriented outwards which permits the alignment of the symmetrical axes of both guides, ensuring that the blind's movement is not changed.
