(54) **Method of driving a plasma display apparatus**

(57) A method of driving a plasma display apparatus in which a plurality of first and second electrodes are arranged so as to be adjacent to one another, a plurality of third electrodes are arranged so as to cross the first and second electrodes, and each field of display is composed of plural subfields each having at least a reset period, wherein the reset period comprises a process of

applying a first waveform in which an applied voltage varies with time in a positive direction, thereafter applying a second waveform in which an applied voltage varies with time in a negative direction, and wherein arrival voltage values of the first waveforms in the reset periods of at least two subfields among the plural subfields are different.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 07 11 5957

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
