(54) **Recording, reproduction, image-capturing and displaying content**

(57) Disclosed is a recording-reproduction apparatus having a recording-reproduction unit which includes an operation unit and an output unit. The operation unit has an operation element. The recording-reproduction unit further includes a control unit that displays a discrimination figure displaying the current operating status of the recording-reproduction apparatus in the center of the operating-content-viewing region and generates a display command signal for displaying a plurality of discrimination figures in the periphery of the discrimination figure displaying the current operating status. The discrimination figures are provided as guiding signs to which contents of recording or reproduction operations are assigned. The output unit is provided for outputting a display signal prepared from the display command signal generated from the control unit.

play command signal for displaying a plurality of discrimination figures in the periphery of the discrimination figure displaying the current operating status. The discrimination figures are provided as guiding signs to which contents of recording or reproduction operations are assigned. The output unit is provided for outputting a display signal prepared from the display command signal generated from the control unit.
