(54) **Bearing construction for high power liquid condensers and coolers**

(57) A bearing construction, specifically designed for high power liquid condensers and coolers comprises, in alternative to a conventional panel construction, a grid construction made of a series of tie-rods and struts, of suitable size and arrangement, adapted to support the

air conveyers and related fans and fittings, thereby allowing to make a very strong product which can resist against mechanical stresses due to the movements and handlings caused by the transport and assembling of the bearing construction.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 07 01 7548

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.  
The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
