(54) **Speed dependent displaying of information items in a graphical user interface**

(57) Electronic device with a display screen and a navigational input device places information items in a string along a path on the display screen. The user can move the string of information items along the path at a variable speed by using the navigational input means.

The shape of the path is changed in relation to the speed at which the string of information items is moved along the path. At low speeds the path is substantially rectangular and follows the outline of the rectangular display screen. At higher speeds the path becomes more and more curved.
