(54) A keyboard structure

(57) A keyboard structure for electrical and electronic devices for civil and/or industrial uses, comprising a main body, substantially monolithic, and an actuator element positioned in a housing cavity, produced in said main

body. The housing cavity is defined at least partly by a relatively flexible wall of said main body. This flexible wall is operatively associated with the actuator element so that bending thereof causes activation of said actuator element.

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO.

EP 08 15 1258

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
