Claims

1. A method for determining whether an individual has or is susceptible to development or occurrence of a cardiovascular disease or event, wherein the individual is in need of such determination, the method comprising the step of:

   detecting a polymorphic variant of a CVDA polymorphism in the individual or detecting a polymorphic variant in strong linkage disequilibrium with a CVDA polymorphism; or
   detecting a haplotype comprising a polymorphic variant of the CVDA polymorphism in the individual; or
   detecting an allele of a gene comprising the polymorphic variant of the CVDA polymorphism in the individual.

2. The method of claim 1, wherein:

   a) the polymorphic variant is associated with an increased risk that the individual has or is susceptible to development or occurrence of a cardiovascular disease or event; and/or
   b) the polymorphic variant is found within a gene selected from the group consisting of: one or more of the genes listed in Table 1.

3. The method of claim 1 or claim 2, wherein the detecting step comprises determining which of at least two polymorphic variants exists at a polymorphic site.

4. The method of any one of claims 1 to 3, further comprising the step of determining an absolute risk or relative risk ratio based at least in part on the identity of the polymorphic variant; and in which case optionally wherein the determination of the absolute risk or relative risk ratio is based at least in part on at least one classical risk factor.

5. The method of any one of the preceding claims, further comprising detecting polymorphic variants of one or more additional CVDA polymorphisms; and in which case either:

   a) wherein the one or more additional CVDA polymorphisms are selected from polymorphisms listed in Table 1 or Table 2; and/or
   b) wherein the polymorphic variants constitute a haplotype and in which latter case further optionally either:

      i) wherein the haplotype is associated with an increased risk that the individual has or is susceptible to development or occurrence of a cardiovascular disease or event; and/or
      ii) further comprising the step of determining an absolute risk or relative risk ratio based at least in part on the haplotype; and in which case further optionally wherein the determination of the absolute risk or relative risk ratio is based at least in part on at least one classical risk factor.

6. The method of any one of the preceding claims, wherein the cardiovascular disease or event is a myocardial infarction.

7. The method of any one of the preceding claims, further comprising the step of determining, based on the identity of the polymorphic variant, that the individual is at increased risk of occurrence of a cardiovascular disease or event; and in which case optionally further comprising the step of selecting a therapeutic regimen for the individual, wherein the therapeutic regimen is selected based on the increased risk.

8. An isolated polynucleotide or polypeptide encoded by a CVDA gene, wherein said CVDA gene comprises a polymorphic variant of a CVDA polymorphism.

9. A kit comprising a plurality of probes or primers selected to detect one or more polymorphic variants of a CVDA polymorphism or a polymorphism in strong linkage disequilibrium with a CVDA polymorphism, wherein at least 10% of the probes or primers are selected to detect a polymorphism associated with cardiovascular disease.

10. The kit of claim 17 comprising one or more of the following:

    a) a plurality of allele-specific oligonucleotides; and/or
    b) a plurality of oligonucleotides that terminate adjacent to a CVDA polymorphic site; and/or
    c) probes or primers selected to detect polymorphic variants at a plurality of different polymorphic sites; and/or
    d) labelled probes and/or labeled primers; and/or
    e) a plurality of probes or primers for detecting each of a plurality of polymorphic variants; and/or

f) a solid support attached to at least some of the probes and/or primers; and/or
g) microparticles attached to at least some of the probes and/or primers; and/or
h) reagents for performing a Luminex assay; and/or
i) probes or primers selected to detect one or more haplotypes associated with cardiovascular disease, wherein at least one of said haplotypes comprises a CVDA polymorphic variant.

11. The kit of claim 10 or claim11, wherein the probes are provided as an array.

12. A computer-readable medium on which is stored an identifier for each of a plurality of polymorphisms and/or haplotypes listed in Table 1:

a) and an indicator of the frequency with which at least one polymorphic variant of the polymorphism exists in a plurality of individuals that have experienced a major coronary event or have been diagnosed with cardiovascular disease; and/or
b) wherein at least and an indicator of the absolute or relative risk for the occurrence of a cardiovascular disease or event in an individual having a disease-associated polymorphic variant of each of the polymorphisms; and/or
c) and an indicator of the absolute or relative risk for the occurrence of a cardiovascular disease or event in an individual having a disease-associated variant of each of the haplotypes.

Figure 1: Group Statistics of Study Subjects

		N	Mean	Standard-deviation
Age (years)	PROCAM	213	47,58	5,813

INCOMPLETE SEARCH

The Search Division considers that the present application, or one or more of its claims, does/do not comply with the EPC to such an extent that a meaningful search into the state of the art cannot be carried out, or can only be carried out partially, for these claims.

Claims searched completely :

Claim(s) not searched:
12

Reason for the limitation of the search (non-patentable invention(s)):

Article 52 (2)(d) EPC - Presentation of information

European Patent Office

Application Number
EP 07 25 1633

CLAIMS INCURRING FEES

The present European patent application comprised at the time of filing more than ten claims.

☐ Only part of the claims have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims and for those claims for which claims fees have been paid, namely claim(s):

☐ No claims fees have been paid within the prescribed time limit. The present European search report has been drawn up for the first ten claims.

LACK OF UNITY OF INVENTION

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

see sheet B

☐ All further search fees have been paid within the fixed time limit. The present European search report has been drawn up for all claims.

☐ As all searchable claims could be searched without effort justifying an additional fee, the Search Division did not invite payment of any additional fee.

☒ Only part of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the inventions in respect of which search fees have been paid, namely claims:

invention 1: claims 1-12 all partially and invention 2: claims 1-12 all partially

☐ None of the further search fees have been paid within the fixed time limit. The present European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims, namely claims:

☐ The present supplementary European search report has been drawn up for those parts of the European patent application which relate to the invention first mentioned in the claims (Rule 164 (1) EPC).

European Patent Office

LACK OF UNITY OF INVENTION
SHEET B

Application Number
EP 07 25 1633

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

Invention 1: 1-12 (all partially)

Method for determining whether an individual has or is susceptible to the development or occurrence of a cardiovascular disease, wherein the polymorphic variant SNP_A-2084457 corresponding to SEQ ID No #1 is detected; isolated polynucleotide or polypeptide comprising the polymorphic variant according to SEQ ID No #1, a kit comprising a plurality of probes or primers selected to detect one or more polymorphic variants according to SEQ ID No #1 and a computer-readable medium on which an identifier for the polymorphism and/or haplotype according to SEQ ID No #1 are stored.

Invention 2: 1-12 (all partially)

Method for determining whether an individual has or is susceptible to the development or occurrence of a cardiovascular disease, wherein the polymorphic variant SNP_A-1902305 corresponding to SEQ ID No #2 is detected; isolated polynucleotide or polypeptide comprising the polymorphic variant according to SEQ ID No #2, a kit comprising a plurality of probes or primers selected to detect one or more polymorphic variants according to SEQ ID No #2 and a computer-readable medium on which an identifier for the polymorphism and/or haplotype according to SEQ ID No #2 are stored.

Inventions 3-9999: 1-12 (all partially)

Method for determining whether an individual has or is susceptible to the development or occurrence of a cardiovascular disease, wherein the polymorphic variants corresponding to SEQ ID Nos #3-9999 are detected; isolated polynucleotides or polypeptides comprising the polymorphic variants according to SEQ ID Nos #3-9999, kits comprising a plurality of probes or primers selected to detect one or more polymorphic variants according to SEQ ID Nos #3-9999 polymorphism and a computer-readable medium on which an identifier for each polymorphism and/or haplotype according to SEQ ID Nos #3-9999 are stored.

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO. EP 07 25 1633

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
