(54) **Decorative door frame attaching apparatus**

(57) A decorative door frame attaching apparatus 1 comprises conveying means 4 for conveying a door 2 in a laid state, transferring means 6 for superimposing a decorative frame 3 on the door 2, and nailing means 7 for nailing the decorative frame 3. Adhesive is applied to a top surface of the door 2 at an adhesive applying position A, and the door 2 is stopped at an attaching position B. The transferring means 6 transfers the square-U-

shaped decorative frame 3 from a holding position E to the attaching position B, and superimposes on the stopped door 2. The nailing means 7 nails the decorative frame 3, which is thereby fixed to the door 2. The door 2 is reversed at a reversing position C and returned to the adhesive applying position A. A second decorative frame 3 is attached to a new top surface of the reversed door 2. The decorative frame 3 can be efficiently attached to the door 2.
