(54) **Heating head for thermally shrinking sealing capsules on bottle necks**

(57) A heating member (30) integral with the head has a cylindrical heated cavity (30a) in which the bottle neck with capsule is insertable. The head (20) is mountable on a heating machine adapted to movably support the head between a resting position in which the heating member (30) is axially spaced from the capsule, and an operative position in which the heating member (30) surrounds the capsule and interacts with it by heating it. A shield (32) having a tubular profile is insertable between the heating member (30) and the bottle neck and is movably supported in an axial direction with respect to the heating member (30) under control of actuator means (34), between a resting position external to the heated cavity (30a), and an working position in which it is interposed between the capsule and the heating member (30) and shields the capsule from the heating action applied by the heating member (30).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 08 00 7081

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
