(54) **Medical site**

(57) A medical site comprises a housing (102) having a flow path (54) and a septum (50) bounding a portion of the flow path, a pair of spaced support walls (122) coupled to the housing (102) and configured such that the housing is disposed between the support walls to define a gap therebetween, each support wall (122) having an elongated flat portion (124) extending in a direction

astride the housing such that an inner surface (130) thereof confronts the housing (102) and an outer surface (136) thereof faces away from the housing (102), and at least one elongated ridge (138) disposed on the outer surface (136) of at least one of the support walls for gripping the site, the elongated ridge (138) extending along a line in the same direction as the flat portion (124) of the support wall (122).
