(54) **Ventilating device**

(57) The present invention relates to a ventilating device comprising a motor for rotatably driving a centrifugal fan about an axis of rotation, a substantially closed housing, which surrounds the centrifugal fan and at least part of the motor, which housing is provided with at least one inlet opening and at least one outlet opening, which outlet

opening is provided in a side wall of the housing that is positioned at least substantially radially relative to said axis of rotation, and suspension means arranged for suspending the ventilating device from a ceiling, wherein the motor and the housing are supported at least substantially independently of each other by the suspension means.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 09 00 0419

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
