(54) Textile machine system and textile machine

(57) The present invention provides a textile machine system which eliminates the need to communicate via a host computer and which facilitates rearrangement of frames. An automatic winder system (70) includes a plurality of automatic winders (60). Each of the automatic winders (60) includes a plurality of yarn winding units (16), a frame control device (11), and a ZigBee terminal (12). The frame control device (11) manages information on the yarn winding unit (16) and controls the yarn winding unit (16). The ZigBee terminal (12) can carry out wireless communication directly with a ZigBee terminal (12) provided in another automatic winder (60). The frame control device (11) transmits and receives winding information to and from the frame control device (11) provided in another textile machine (60) via wireless communication by the ZigBee terminals (12).

1 The present search report has been drawn up for all claims

Place of search	Date of completion of the search	Examiner
Munich	25 March 2014	Dupuis, Jean-Luc

CATEGORY OF CITED DOCUMENTS

X : particularly relevant if taken alone
Y : particularly relevant if combined with another document of the same category
A : technological background
O : non-written disclosure
P : intermediate document

T : theory or principle underlying the invention
E : earlier patent document, but published on, or after the filing date
D : document cited in the application
L : document cited for other reasons

& : member of the same patent family, corresponding document

EPO FORM 1503 03.82 (P04C01)

ANNEX TO THE EUROPEAN SEARCH REPORT ON EUROPEAN PATENT APPLICATION NO. EP 09 00 3538

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
