(54) **Image forming device**

(57) An image forming device having a frame, a door, and a movable image forming unit to be assembled in the frame when the door is open. Positioning of the image forming unit relative to the frame and a closing position of the door are maintainable when the door is closed.

When the door is closed, a hook at the door side is engaged with a hook of a lock unit at the frame side. The lock unit is movable in association with the movement of the door to its closed position to move a pressure portion, so that a part of the image forming unit is pressed by the pressure portion for positioning.
