(54) **Modular flooring**

(57) The invention relates to an easily removable modular flooring comprising a plurality of modules (1), wherein each module (1) comprises a ceramic or natural stone tile (2) which is adhered to a support element (3) with a planar configuration comprising cellulosic fibers,

which allows improving the mechanical characteristics of existing floorings by means of a direct transmission of loads to the support elements (3), in addition to increasing the mechanical bending strength and allowing a simple, low-cost and highly versatile manufacture from large standard sized panels by means of cutting operations.
