(54) Device and method for flushing a toilet

(57) A device for flushing a toilet comprises a flushing mechanism having a first lifting device (150) for manually initiating a large volume flush, and a second lifting device (160) for manually initiating a small volume flush. The device further comprises a sensor means (120) arranged to generate a signal upon registration of input data, and at least one motor (190) configured to receive the signal and being coupled to the first lifting device (150) or the second lifting device (160), said at least one motor (190) being operable to initiate either a large volume flush or a small volume flush upon receipt of the signal from the sensor means (120).
