(54) **Control unit for a drying device, drying device and drying arrangement**

(57) The invention relates to a control unit for a drying device. The drying device is particularly intended for the drying of fixed structures. The drying device includes a fan and an electrical resistance. The control unit is used for controlling the drying device and for connecting and disconnecting the same to and from an electricity network. According to the invention, the control unit (2) is arranged as a module (20), comprising:

- a plurality of connectors (5; 5<sup>1</sup>, 5<sup>2</sup>, 5<sup>3</sup>,...,5<sup>6</sup>), particularly first connector components (51), by way of which the control unit (2), especially its elements, is attachable to not less than two, most preferably to a plurality of drying devices;
- a timer element (21) and a first coupling element (22) for timing the operation of the drying devices attached to the connectors (5; 5<sup>1</sup>, 5<sup>2</sup>, 5<sup>3</sup>,...,5<sup>6</sup>), and for connecting and disconnecting the same to and from an electricity network; and
- an electrical connection (4) for coupling an electricity network to the control unit (2), and further from the control unit (2), by way of the connectors (5; 5<sup>1</sup>, 5<sup>2</sup>, 5<sup>3</sup>...,5<sup>6</sup>), to the drying devices.

The invention relates to a drying device, which is attachable to the discussed module 20, and a drying arrangement, which makes use of a module and a drying device of the invention.
