(54) **Surface-mounted door and frame which are particularly suitable for closing inspectable wall recesses**

(57) Surface-mounted door and frame, particularly suitable for closing inspectable wall recesses containing the connections for electrical, telephonic, water or gas supplies installed in buildings, of the type in which the door (S) possesses integrally, on the opposite side to that having the closing means (10-13), a suitable number of L-profile and approximately T-shaped perpendicular hinge arms (9) in a symmetrical arrangement, the wide part of the T of the arms being insertable into the wide part of the similarly T-shaped hinge slots (4) formed in at least one or all sides of the bezel (1-401) of the frame (T) on which the door is placed in the closed position, which slots are oriented so their leg is perpendicular to

and away from the frame in such a way that when the door is closed onto the frame, the wide part of the arms of the door comes underneath the leg of said slots, thereby securing the door to the frame but allowing it to be rotated and allowing it to be removed easily in a deliberate operation in which the wide part of said arms is lined up with the wide part of said slots and the door is extracted almost parallel to the frame, which door and frame are **characterized in that** the frame (T) is of a simplified form and can be mounted using screws and wall plugs (3, 103) in holes made directly on the visible face of the wall (M) containing the inspectable recess (V) which is closed by the present surface-mounted system.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 10 16 6057

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
