(54) **Facade panel for supporting brickwork**

(57) The panel (1) according to the invention for constructing building facades comprises a) a base (3) substantially shaped like a plate, shell, mesh or grill, b) a plurality of veneering anchorage elements (5), each of which forms a seat (7) arranged to accept and position a brick (M), a portion of brick or a tile. The plurality of veneering anchorage elements (5) is arranged on at least one larger face of the base (3) such that when a plurality of bricks (M) is inserted in the respective seats (7), a predetermined design or ornamental pattern is created. The seats (7) act as a guide in making the design or ornamental pattern, enabling the wall to be veneered much more quickly.
