**Suwon-si, Gyeonggi-do, 443-742 (KR)**

(54) **Refrigerator**

(57) A refrigerator includes an evaporator (50) surrounding a storage chamber (20) in contact with an outer surface of the storage chamber; a basket (30) received in the storage chamber to receive at least one container (40) storing food, and taken in and out of the storage chamber according to the opening and closing operation of the door; and an auxiliary cooling member (70) surface-contacting a front outer surface of the basket, which is adjacent to the evaporator. The auxiliary cooling member (70) is made of a high thermal-conductivity material so that high inner temperature of the storage chamber is efficiently transferred, accordingly reducing the temperature deviation.
