(54) **Outer wall element with wooden frame**

(57) The invention relates to a prefabricated outer wall element, comprising a frame extending at least on its outer edges, substantially flat filling parts connected to the frame and extending parallel to the main plane of the outer wall element, wherein the frame is adapted to be engaged by mounting means for mounting the outer wall element on a structure supporting the outer wall, wherein the frame is manufactured from wood and wherein the frame is adapted to be engaged by mounting means.

The wooden frame is preferably adapted to extend on the inner side in the direction transversely of its main plane, and parts facing its outer side are covered by profiles of metal or plastic. The parts of the construction visible from inside are thus manufactured from wood. The parts of the wooden construction facing outside are also protected from weather influences.
