(54) **Modular system for house building**

(57) The present invention relates to a modular system for the construction of buildings, for example, residential buildings, the system comprising a plurality of elongate and insulated building elements, which building elements consist of at least an inner and an outer cladding layer and between the inner and the outer cladding layer there is disposed a layer of filler material. The layer

of filler material may be constituted of polyurethane. In the layer of polyurethane there is further provided at least one layer of a fire-retardant material. Furthermore, the elongate building elements are in their height and width direction adapted to be connected to a plurality of insert elements in order thereby to assemble the elongate and load-bearing building elements into the walls, floor and ceiling of a building.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 11 15 2121

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
