(54) **Magazine**

(57) A magazine of the present invention includes a main body (10) and a plug member (20). The main body is formed with a trough (11) and a recess (12). The trough (11) is used for receiving bullets. The recess (12) has a lateral opening (121), a top portion (122) and a bottom portion (123). The recess (12) is provided to receive an air cartridge (1) between the top portion (122) and the bottom portion (123). The lateral opening (121) is used for the air cartridge (1) being put therethrough. The main body (10) is formed with a hole (13), and the hole (13) passes through the bottom portion (123) and communicates with the recess (12). A diameter of the hole (13) is smaller than a maximum diameter of the air cartridge (1). The plug member (20) is screwed into the hole (13) so as to press the air cartridge (1) toward the top portion (122). Accordingly, the plug member (20) of the present invention gradually presses the air cartridge (1) by screw action. Once the plug member (20) is completely screwed into the hole (13), the air cartridge (1) does not fall out from the recess (12).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 11 15 1048

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
