(54) **Light reflector base**

(57) This invention deals with a light reflector base that will supplement the light emitted by a lamp projecting the light rays toward the least-favoured parts of the light field, the reflector base object of this invention is placed under the fixture to increase the lighting capacity and the illumination radius.

This invention will preferably consist of a pyramidal structure (1) made of a material with a high degree of reflectivity, which will be placed inside the fixture, under the lamp illuminator (2) in a way that the light emitted by the lamp will be reflected on the walls of the pyramid at different angles.
