(54) **Subsea control module with removable section having a flat connecting face**

(57) A subsea device is configured to control a sub-sea well. The subsea device includes a frame (82); a blowout preventer (84) connected to the frame (82) and configured to close a bore that fluidly communicates with the subsea well; a pressure supply line (90) connected to the frame (82) and configured to provide a fluid under pressure; a control module (100, 110) connected to the frame (82) and configured to receive the fluid from the pressure supply line (90) and to distribute the fluid to control various functions of the subsea device, the control module (100, 110) including a fixed part (100) and a removable section (110); the fixed part (100) having a first base (191) connected to a valve manifold (130) that houses a hydraulic activated valve (106); and the removable section (110) being configured to detachably attach to the fixed part (100) and including a second base (111) connected to an electrically activated valve (108).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 11 16 4037

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
