(54) **Fabric sweeper**

(57) A fabric cleaning device (410) comprises a housing (420), a roller (460), two sections of directional material (473) preferably provided inside the housing (420) on approximately opposite sides of the roller (460) and internally attached to the housing, and a stop locking the main roller at a specific point, wherein the roller only rotates about 90 degrees in both directions. The roller (460) and the sections of directional material (473) are preferably provided with velour. A roller (460) is disclosed which is circular and the sections of directional material (473) have the shape of segments of a circle such that the velour on the sections of directional material tangentially engages the velour (472) on the roller (460).

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 11 17 9841

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
